EASY TO CARRY
IDEAL FOR THE OFFICE**

SPRAY & SWISHTM

DIRECTIONS FOR USE FOR ADULTS AND CHILDREN OVER 7

IMPORTANT - SHAKE WELL BEFORE USE

AS A SPRAY - NO BRUSH - NO WATER

A shot of spray in the mouth three or four times each day disperses a small dose of active ingredients to sustain a reservoir effect in the mouth and stimulate the production of saliva. The use of **JANINA** **OPALE** Liquid Toothpaste Spray used at frequent intervals will offer lasting gum protection and help control bad breath and whiten teeth safely.

SPRAY AND SWISH

Spray directly into mouth - ensuring spray head is close to mouth. Swish around the mouth for about 1 minute. Then spit out or swallow. (IF SWALLOWED DO NOT EXCEED THREE SHOTS A DAY - 150 micro litres per shot. IF SPAT OUT USE AS OFTEN AS DESIRED). FOR BEST RESULTS DO NOT RINSE MOUTH WITH WATER AFTER USE.

WITH A TOOTHBRUSH

Spray four shots directly into the mouth and brush as normal. When brushing is complete spit out excess but FOR BEST RESULTS DO NOT RINSE MOUTH WITH WATER AFTER USE.

FOR USE WITH DENTURES

Spray as required directly onto the denture (whole denture) - leave for thirty minutes (minimum). Rinse the denture with water and place denture into the mouth. Then spray one shot directly into the mouth and swish for 1 minute - spit out or swallow. (IF SWALLOWED DO NOT EXCEED THREE SHOTS A DAY - 150 micro litres per shot. IF SPAT OUT USE AS OFTEN AS DESIRED). FOR BEST RESULTS DO NOT RINSE MOUTH WITH WATER AFTER USE.
